How this index was created

This index was created using Logos 5 using the following method:

1. A word list was created of the entire Lexham Hebrew Bible, and sorted by frequency.
2. This was exported to Microsoft Excel, and words which appeared more than once were deleted.
3. Using the find/replace function of a text editor, the column of lemmas was converted into a Logos search string, which therefore finds all hapax legomenas.
4. An analysis search of these results was also exported into Excel. This export gives the Bible references, which weren't part of the original word list.
5. Using Excel's vlookup function, the English gloss (which was part of the word list) was added to the search analysis.
6. Words which had a gloss that began with an uppercase letter were removed, as it was assumed these were proper nouns. Qere readings were also removed.

7. A few corrections were made by hand.
8. If you find errors, please report them to [the forum](#).

Visual Filter

If you wish to create a visual filter for Hapax Legomena, you can copy and paste the following string into a morph visual filter:
